

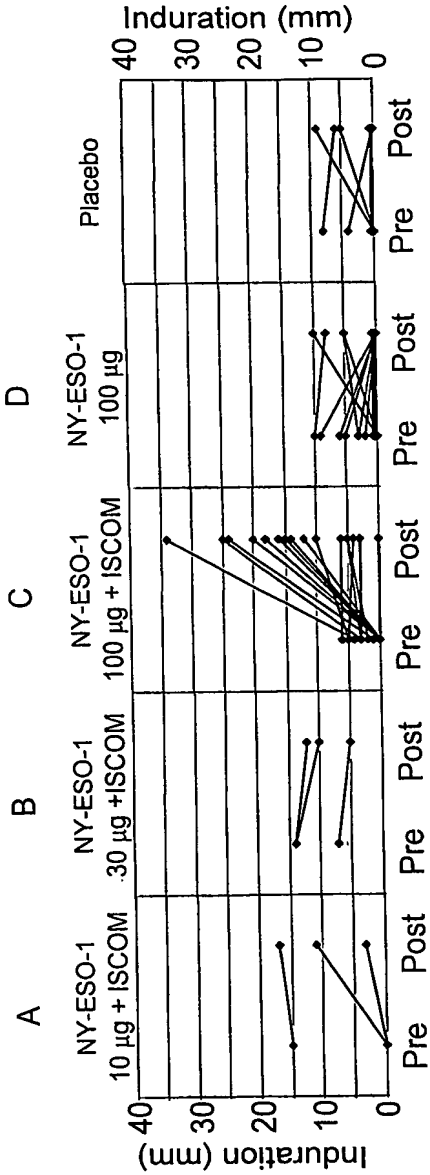

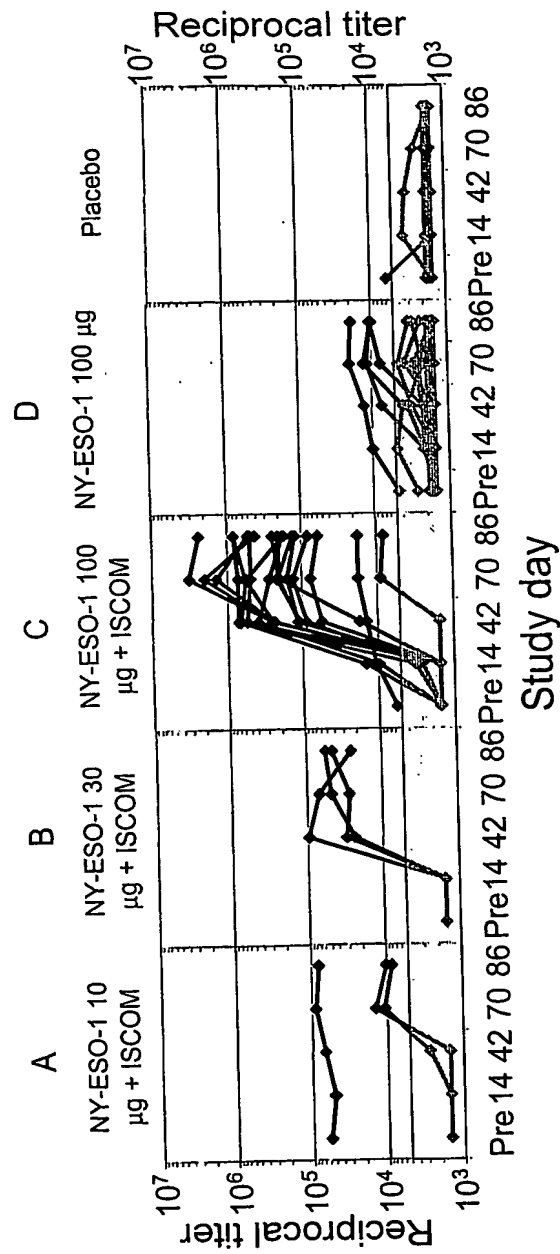

Figure 1

Vaccine induced DTH measurements (induration) 2 days after intradermal injection of 1mg of NY-ESO-1 protein without ISCOM. Curves represent an individual patient within each group:
Pre, before vaccination
Post, after three vaccinations at d 86

Figure 2

Vaccine induced antibody responses. Curves represent individual patients within each group.
Y axis is the reciprocal titre on a logarithmic scale.

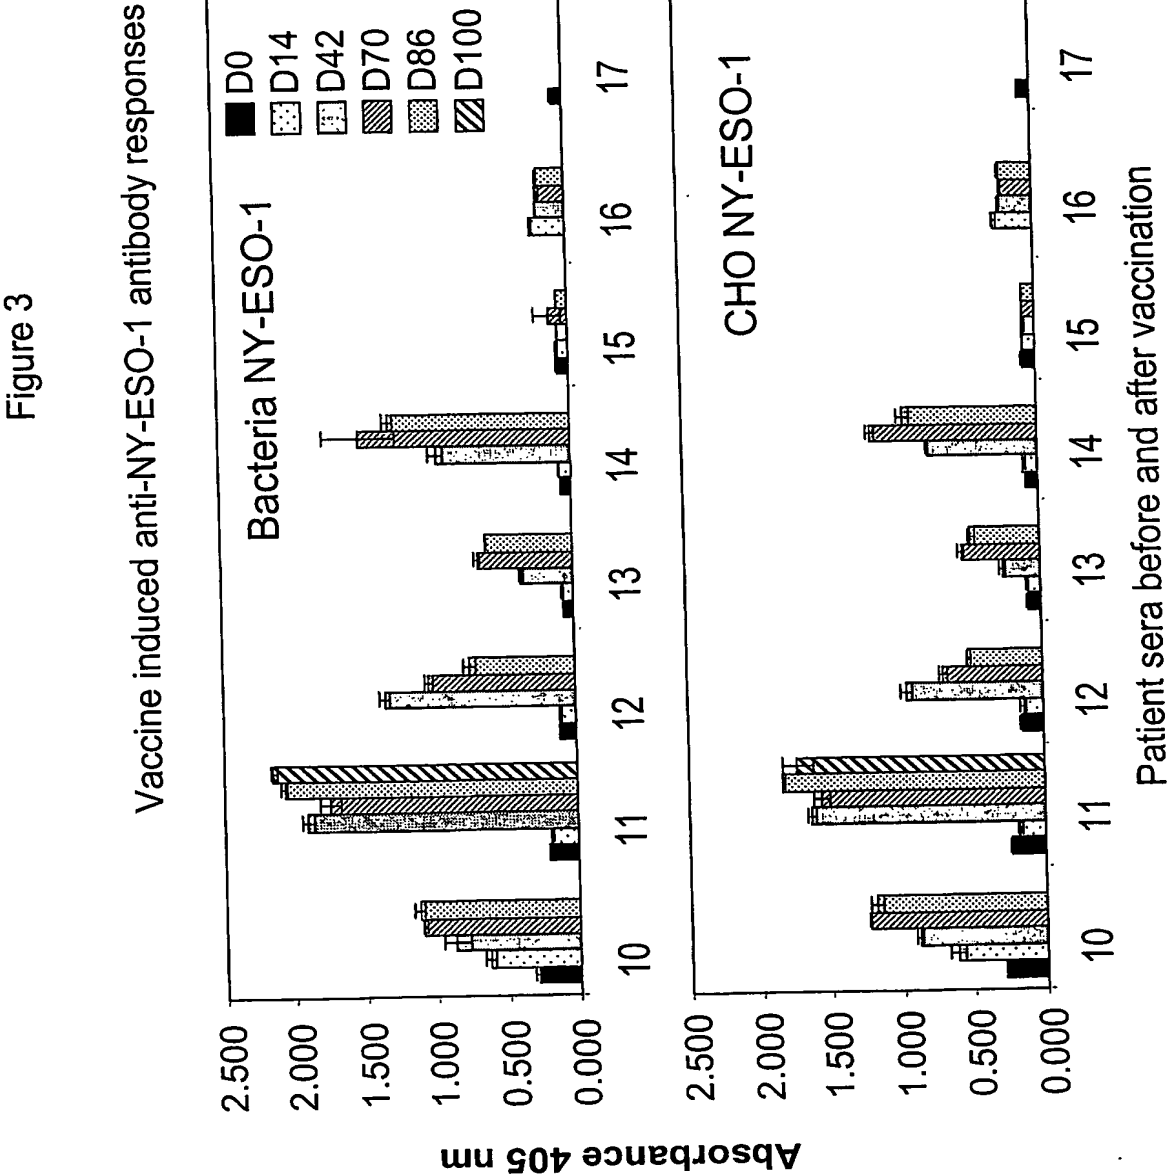

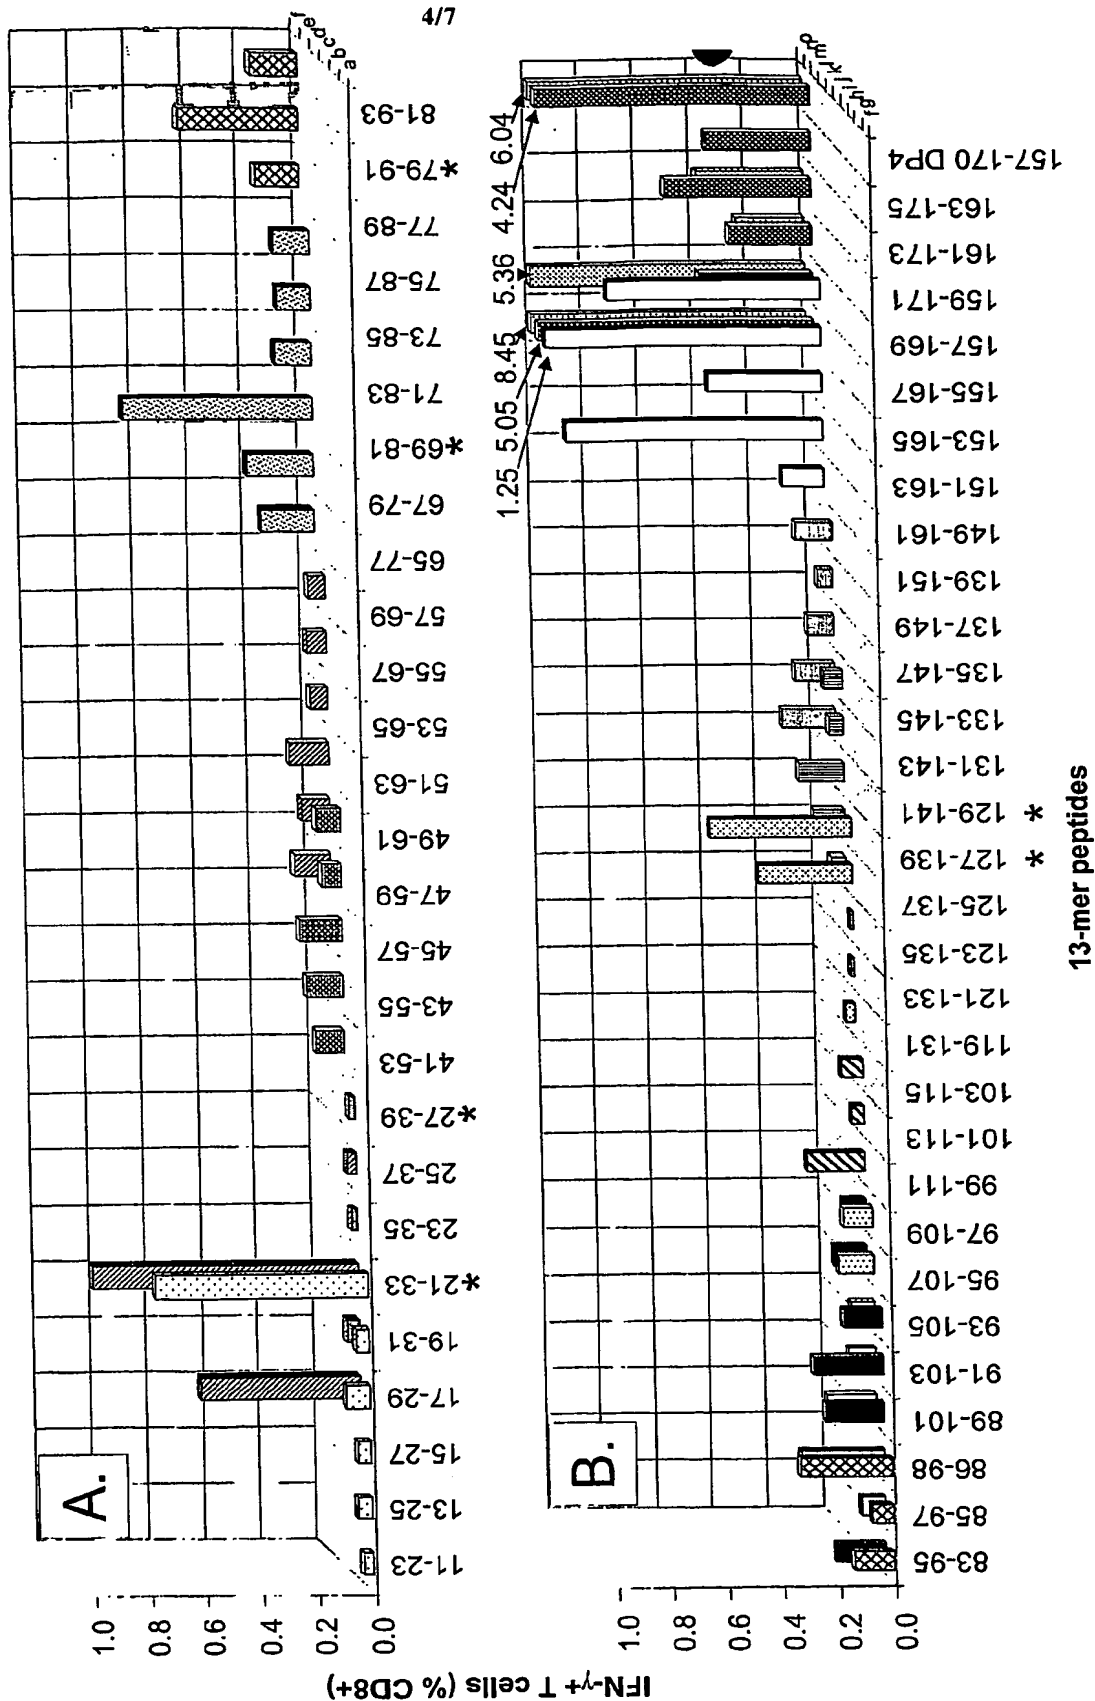

Figure 4
CD8⁺ T cell responses to overlapping peptides

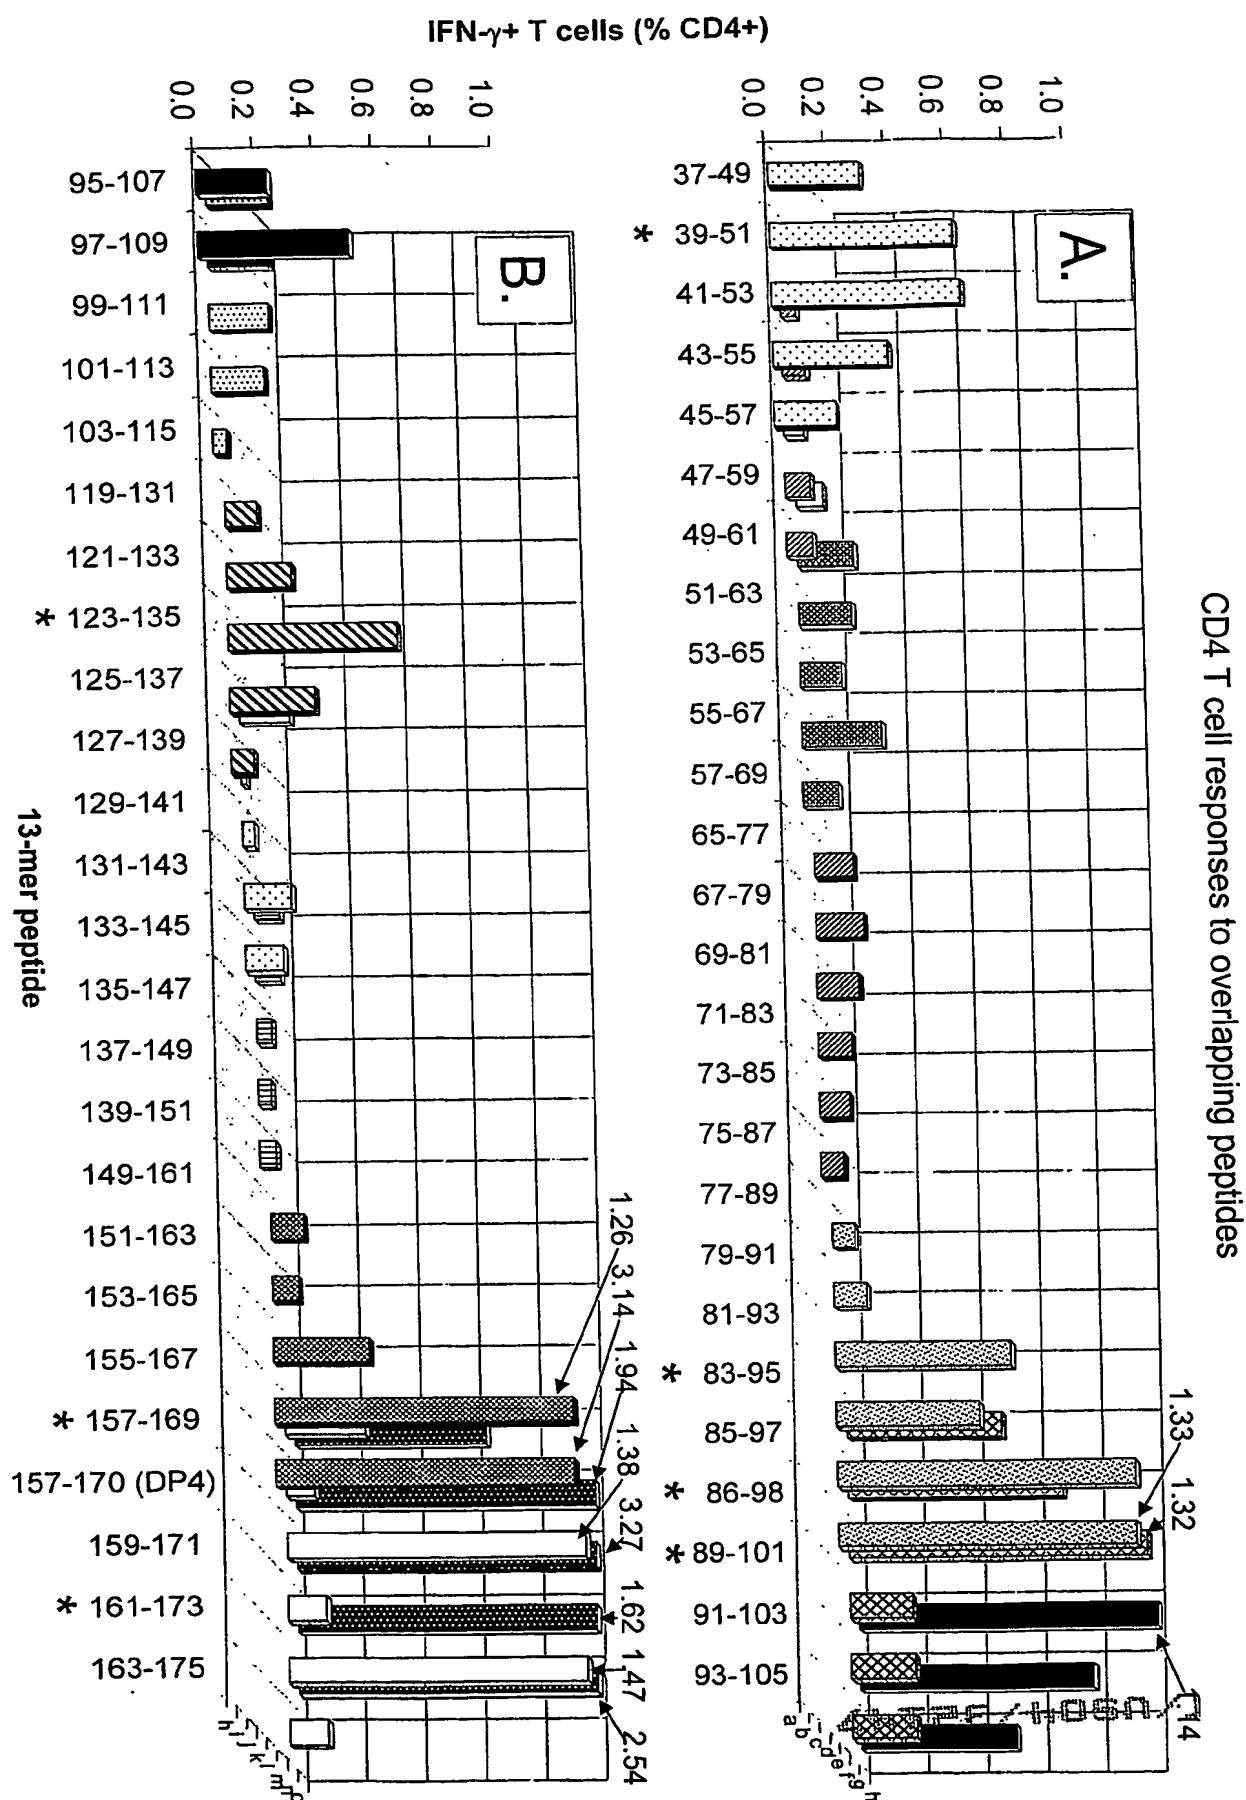

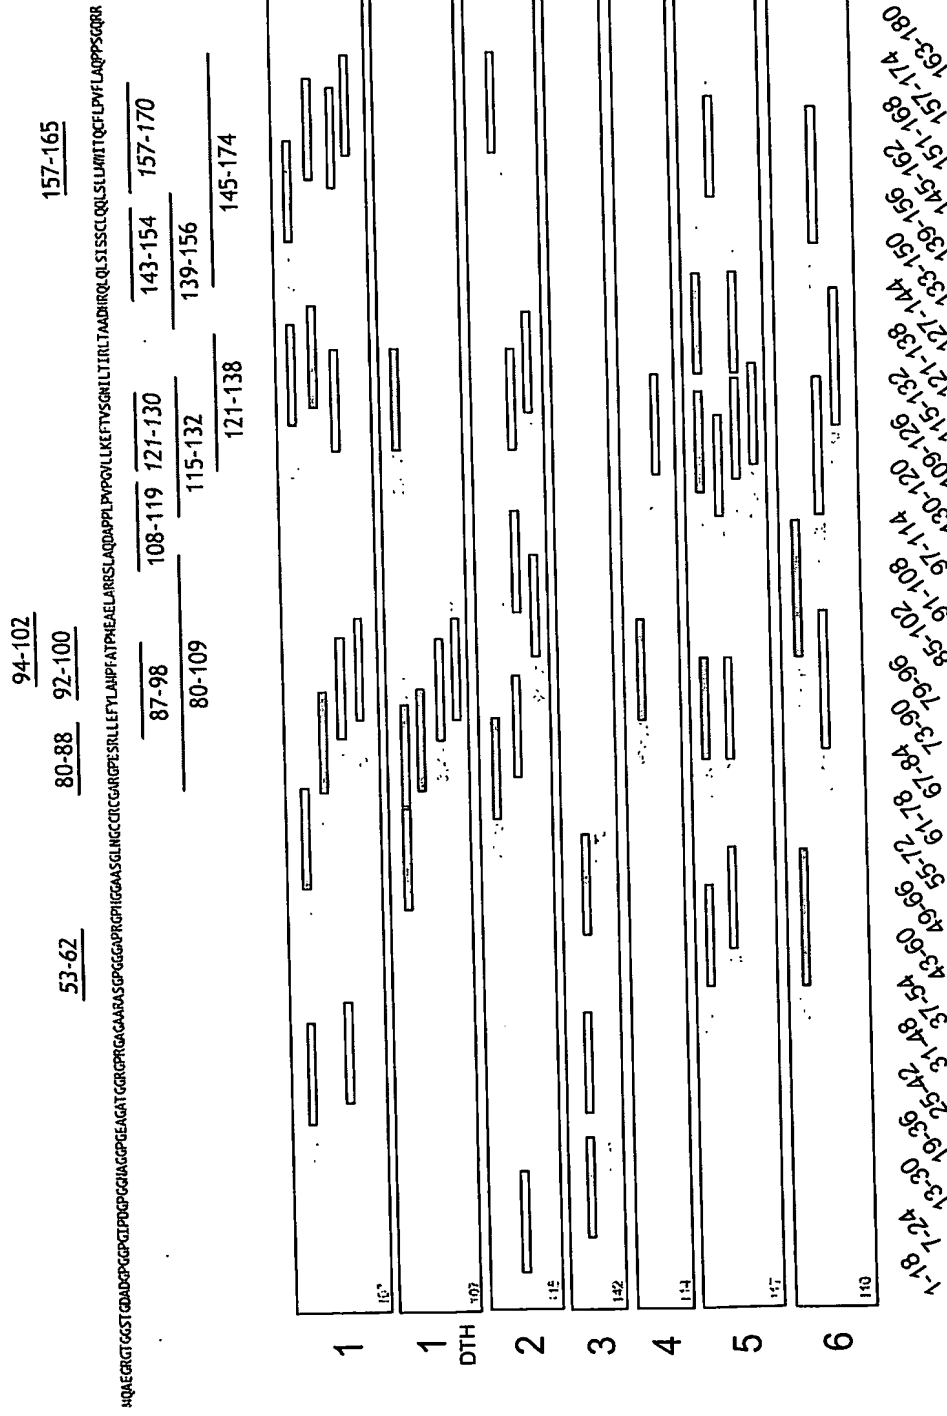

Figure 5

Figure 6

Vaccine induced T cell responses

Figure 7

Disease-free survival after NY-ESO-1.ISCOM
